Education

Indraprastha Institute of Information Technology, Delhi

2024 – Present

B.Tech in Computer Science and Engineering

Shanti Gyan International School

2021 – 2023

Class XII (PCM + CS): 86%

Technical Skills

Languages: Python, C++, C, Java, JavaScript

Systems: Operating Systems, Computer Organization, Process & Memory Management, Computer Networks

Technologies: REST APIs, React.js, Context API, Node.js, Express.js, Next.js, EJS, MongoDB, MySQL, DBMS (Normalization, Transactions), Langchain, Langgraph

Tools: Linux, Git, GitHub, VS Code, Google Colab, Jupyter Notebook, Antigravity, Jules

Concepts: Data Structures, System Design, Debugging, Reliability, Logging, Observability

Projects

ERP Management System

Java, JDBC, MySQL — [GitHub](#)

- Developed a desktop-based ERP Management System using Java Swing and JDBC for database connectivity.
- Implemented modules for employee management, user authentication, and business data management.
- Designed and integrated a MySQL relational database to efficiently store and retrieve data.
- Performed CRUD operations through JDBC and built an event-driven GUI using Java Swing.

NexusCart AI Python, LangGraph, Groq, Pydantic, Next.js, FastAPI/Express, Razorpay API — [GitHub](#)

- Architected a dual-sided commerce gateway enabling natural language grocery procurement and autonomous AI buyer ordering via structured API protocols.
- Engineered a structured intent parser with Groq and Pydantic, converting unstructured cooking goals into deterministic ingredient lists while decoupling LLM output from pricing math.
- Developed a multi-platform Quick-Commerce fallback engine that arbitrates across mock Blinkit, Zepto, and Instamart endpoints to resolve out-of-stock items at the lowest price.
- Implemented Human-in-the-Loop (HITL) circuit breakers using LangGraph MemorySaver to pause checkout on spend-limit triggers, generating mathematically verified Razorpay payment links upon confirmation.

Real-Time Sign Language Translator Next.js, React, Tailwind CSS, MediaPipe, Jules AI — [GitHub](#)

- Developed a real-time computer vision application to translate sign language gestures into text and synthesized speech.
- Leveraged agentic AI development workflows (via Google Jules) to rapidly prototype and integrate complex browser APIs, including WebRTC and the Web Speech API.
- Optimized React component rendering to maintain high frame rates during continuous MediaPipe hand-tracking inference.

Experience

Hostiggo

Aug-28

Web Developer Intern

- Improved website visibility by implementing SEO optimization techniques, including on-page SEO, metadata optimization, content optimization, and website performance improvements.
- Enhanced the website's UI/UX by redesigning key components, improving responsiveness, navigation, and overall user experience.
- Assisted in integrating payment gateway services by evaluating suitable payment providers and supporting the implementation of a secure and seamless payment workflow.
- Collaborated with the development team to optimize frontend functionality, resolve UI issues, and improve overall website performance.

Leadership

- **Content Lead, TechFest Esya'25** — Led content strategy and coordinated content creation for the festival.
- **Member, LDA** — Organized events and collaborated with the team to manage logistics and execution.

Achievements

- Participated in the Internal Round of **Smart India Hackathon 2025**.
- **House Captain (High School)** — Led student teams and coordinated school events and activities.
